Abstract - However, WhatsApp Messenger Application does not support or help advertisements and sending unsolicited messages 2 people is not an honest idea. it's knowing to be creative & use ethical methods of advertising to achieve dead set your consumer base.therefore run WhatsApp Marketing Campaign on digital marketing, you will be ready to find different versions of WhatsApp Application for, Android Phones iPhones, & Windows phones.

Web Application & Desktop versions of WhatsApp are additionally available for you but first, having it installed on your portable is must, as every WhatsApp account should be tied on to at least one signaling. Importing your Facebook information is additionally available to line up your profile, otherwise, you'll manually add an image, your profile name, & activate your WhatsApp account.

For marketing or for generals WhatsApp application goes through your contact list & display you an up-to-date directory of WhatsApp application user who you already know Anyone who has your signaling saved in their phone's address book also will recognize that you just simply have come on WhatsApp excepting you've not done any specific security & privacy settings provided by WhatsApp

Now, we've come to the foremost thing that we delve into this section i.e. the accessible ways to use WhatsApp Marketing Campaign or digital marketing so alloy's us to deep o+ into those- One-to-one chat

It this fashion, you will be ready to directly chat with other users who are on your phone contact list, during the same way as any chat program would work
This way of using WhatsApp application also allows you to video or call or images to your prospect or send some recorded audio snippets to them.

Key Words: WhatsApp Application, CNNS, artificial intelligence, Dataset, Autonomous vehicle, self driving car, Machine Learning Algorithms, simulation

1.INTRODUCTION

At present, WhatsApp application is very important application, which is being used by the whole world. The owner of the WhatsApp application is currently with the Facebook Company. WhatsApp will be available on all types of platforms. You can talk in Android, in iOS, in web, in software, which can be distributed between two persons, whether you can talk in text format. Images can be rendered to each other. Videos and other files can also be sent. There is a lot of convenience in this, such as you can get notifications through Android applications, and also very happy.

A free app: WhatsApp is a free app. In return for which we do not have to pay a single penny completely free and there is no need to give it to any company. You can download it free from any App Store from Google Play Store or from the official website of WhatsApp. Even for using the services of WhatsApp, there is no charge from the users.

Text Massaging: You cannot send unlimited text messages from your WhatsApp to other WhatsApp users just like SMS, but a lot of people are desperate to receive messages. For which you will not have to pay a fee, provided that your device should be connected to the Internet. You can know your friends, family, coworkers, relatives or any other person by chatting on WhatsApp.

Group Chatting: Through WhatsApp, you can chat with many people at once. This feature is called Group Chatting. You can chat with your family group, group of friends, co-worker group separately together.

WhatsApp Calling: You can also make free calls through WhatsApp. For calling, WhatsApp should be installed in the phone of both the persons. You can enjoy the facility of Voice Call and Video Call through WhatsApp.

Send Media: On WhatsApp, you can share multimedia in addition to simple text message and can express your feelings well. You can send and receive photos, Graphics, Audio, Videos etc. to your friends.

2. Material and Methods

Have you ever noticed what the word Whatsapp means? Now the answer must have come in your mind.Yes, it means "what happened", "how is it", "how is it going", etc.Which in a way we use to ask for the well being of the people.This app can be used in computers and laptops. It is designed for almost every platform. That is, you have the device of any operating system, you can easily use this app in it.History of whatsapp

Friends, as I had already told that the story behind this app is very interesting, so let's know what is its history, how it started and how it was made.

How to start Whatsapp?If you want to register and start this app for the first time, I am telling you the steps here, you just have to follow this and your WhatsApp will start.After installing the application from Play Store, it will ask you the number in it after opening it.After entering the number, you will get a message for a confirmation, you put it.Enter the confirmation code, after which your account will be ready.After this you can create your username.You can set the display picture of your app.Also you can set your status as well, nowadays you can also set videos and images as status.
It all started when Jan Koum bought an Apple iPhone in January 2009. After seeing this phone, a vision came to mind about what kind of communication can happen between people in the future.

WhatsApp is a very popular application that is used all over the world. Whatsapp also uses web application all day. I studied a lot of research papers, so that it was understood that bulk whatsapp should be used in the business area, then I started to build this system, already the WhatsApp business in Already market. But in it, you cannot unmask more than 5 people at once. So I started trying to make up about it. So I came to share that it can be made by auto system, then searched a lot of research paper and website and then it was understood that automatic system can be made.

2.1 Apparatus & materials:-

Minimum system requirements
1. Hardware requirements

a. Window system (OS)
b. 360 GB hard disk drive
c. 2 GB Random Access Memory (size)
d. keyboard
e. color monitor
f. Mouse
g. Internet

2.   Software requirements

a.   html,
b.   html5,
c.   css,css3
d.   ,js,
e.   Json
f.   Browser
g.   Visual Studio
h.   .Net framework

2.2 Algorithm

1: - JavaScript object notation (JSON) is a text format for a structured dataset. It was taken JavaScript letters defined in ECMA Script programming Language standards

2: - JSON can represent four primitive types (strings, numbers, Boolean and zero values) and two structured types (objects and tables).

3: - A string is a series of zero or more Unicode characters.

4: - An object is an unplanned collection of zeros or multiple names / values   A pair where the name is a string and the string is a string, a number,   Boolean, zero, object or table.

5: - The matrix has an order of zero or more values.

6: - The words derive from the words "object" and "group" Javascript

7: - JSON 's design goals for this are minimal, portable, textual and   Part of JavaScript.

Steps 1 - Data is in name/value pairs
Example:
{ "name":"Thanos" }

category of standards:
collection: An associative collection of principles.
Boolean: accurate or fake.
numeral: An numeral.
entity: An associative assortment of key/value pairs.
String: Several plain text typescript which usually form a expression.

Steps 2 - Data is separated by commas
Example:
{ "name":"Thanos", "Occupation":"Destroying half of humanity" }

Steps 3 - Curly braces hold objects
Example:
var person={ "name":"Thanos",
"Occupation":"Destroying half of humanity" }

Step 4 - Here person is the object.

Steps 5 - Square brackets hold arrays
    Example:

> *var person={ "name":"Thanos",*
> *"Occupation":"Destroying half of humanity",*
> *"powers":*
> *["Can destroy anything with snap of his fingers",*
> *"Damage resistance", "Superhuman reflexes"] }*

Steps 6 - Here person is the object & powers is an array.

Examples: filter_none ,brightness_4

Code for automatic sender method

```
<script> function simulateMouseEvents(element, eventName)

{ var mouseEvent = document.createEvent('MouseEvents');

mouseEvent.initEvent(eventName,         true,         true);
element.dispatchEvent(mouseEvent);

}

// Replace My Contact Name with the name

// of your WhatsApp contact or group e.g. title="Peter Parker"

name            =            "My            Contact
Name"simulateMouseEvents(document.querySelector('[title="
' + name + '"]'), 'mousedown');

function startTimer() {      setTimeout(myFunc, 3000); }

startTimer(); var eventFire = (MyElement, ElementType) =>
{      var            MyEvent            =
document.createEvent("MouseEvents");
        MyEvent.initMouseEvent (ElementType, true, true,
window, 0, 0, 0, 0, 0, false, false, false, false, 0, null);
        MyElement.dispatchEvent(MyEvent); };

function myFunc() {         messageBox=
document.querySelectorAll("[contenteditable='true']")[1];
        message = "My Message"; // Replace My Message
with your message use  to add spaces to your message

        counter = 5; // Replace 5 with the number of times
you want to send your message      for (i = 0; i < counter;
i++) {            event = document.createEvent("UIEvents");

messageBox.innerHTML = message.replace(/ /gm, ''); // test it

event.initUIEvent("input", true, true, window, 1);
        messageBox.dispatchEvent(event);

        eventFire(document.querySelector('span[data-
icon="send"]'), 'click');
```
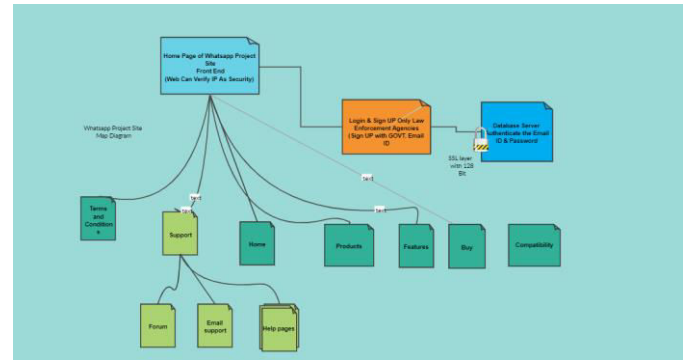

```
        }

}

</script>
```

block diagram of bulk WhatsApp Sender

Whats-App Web: A browser base adaptation of Whats-App.Whats-App Web & Whats-App Desktop are central processing unit based extensions of the Whats-App details on your phone. The communications you send and take delivery of are fully synchronised between your phone & your computer, & you can see all communication on both devices. Open https://web.Whats-App.com in your Chrome, Firefox, Opera, Safari or Edge browser & scan the QR code by using the Whats-App app on your phone. Due to browser restrictions, some facial form may be lost on Whats-App Web.

 How to use Whats-App on your PC

 Using Whats-App on your PC is called Whats-App Web. To use it, you'll need Whats-App on your phone as well.

Here's what to do depending on your phone type:

Android

1 Open web.Whats-App.com on your computer using the web browser (Chrome, Firefox, Opera, Safari or Edge are compatible)

2 Open the Whats-App app on your phone by tapping on it

3 Open the Chats screen & select Menu & then Whats-App Web

4 There will be a QR code (looks like a scrambled barcode) on the computer screen. Scan this using your phone

5 Whats-App will then open in your computer browser & you'll be able to use it as to send messages as you would on your phone

6 When you've finished your session, remember to log out. Click on the three-dot menu above the chats list on the left hand side of the screen

7 Click on Log out at the bottom of the list
