Abstract

Cryptocurrency is fastly gaining interest among Investors in India. In the past few years, there was a tremendous change in the number of investors and analysts suggest that cryptocurrency is not only for city slickers but also for small towns. Many of the investors of Cryptocurrency are from small towns and villages in India. This may prove that the cryptocurrency may serve as another medium of exchange and also another way of storing valuable metals etc as a property. This paper estimates the different types of Crypto Currency of BitCoin and Ethereum through different type of Analytical tools like Time Series Analysis ,ANOVA ,Correlation and Decision tree analysis and suggest for better investment strategies.

Introduction

The first and biggest cryptocurrency ever was called Bitcoin. A peer-to-peer internet payment system called Bitcoin was created in 2008. The peer network-based digital money was introduced in 2009. There is no central authority in charge of running Bitcoin. Between the sender/buyer and the receiver/seller, there is no intermediary or broker. Bitcoin serves as both a store of value and an alternative form of money. The machines running the Bitcoin open-source software that provides the protocol for managing network transactions make up the Bitcoin transaction network. Users require a Bitcoin address in order to access the Bitcoin network. While users can create an address using the free software for Bitcoin. Nevertheless, a lot of customers have accounts with a few different Bitcoin services.

After Bitcoin, Ethereum is the second-largest cryptocurrency in the world. In 2015, Ethereum was introduced with the goal of building a global platform for blockchain-based applications. Like the dollar, bitcoin serves as a medium of exchange. Dollar. The technologies and protocols used by the Ethereum platform are newer and more secure. It also offers a fresh feature. Smart contracts are introduced by the Ethereum platform.

The market capitalizations of Bitcoin and Ethereum were also the most and second-highest, respectively, among all cryptocurrencies.

According to Coinmarketcap.com estimates that as of December 31, 2021, the market capitalizations of Bitcoin and Ethereum were \$875.939 billion and \$438.128 billion, respectively. On the same day, the market value of all crypto currencies was \$1.684 trillion.

Literature Review

According to (Nuraliati & Azwari,2019) Bitcoin is the first implemented digital asset. This research aims to identify and explore Indonesia's crypto currency accounting treatment based on standard and cryptocurrency development. This research was conducted using a literature review and an interview with three informants as a data source. This study uses the technique of data analysis and is a pure qualitative descriptive form. The research outcome is that there has been no clear accounting for

cryptocurrency transactions in Indonesia so far. This research also revealed that cryptocurrency development in Indonesia is currently growing rapidly with the emergence of traders and exchangers as evidence at all times, but development is not balanced without any clear crypto currency rules and policies.

Keywords—component, accounting, cryptocurrency, Indonesia

Bitcoin can make transactions directly between individuals (Faghieh Mohammadi Jalali & Hidari, 2020).Cryptocurrencies offer businesses and individual with low transaction fees, efficiency , high security and privacy (Rejeb et al, 2021).Dyhrberg (2016) finds that Bitcoin has some of same hedging abilities as gold and can be used hedge market specific risk

Objectives of the Study

- To evaluate and compare the performance of the cryptocurrencies for a period of 5 years.
- To analyze the time series data for forecasting.
- To identify the relationship between Bitcoin currency and Ethereum currency

Need for the Study

The pandemic and the lockdowns have inflicted heavy losses on sales and incomes of many businesses-big or small, formal or informal,Consequently, many companies and enterprises are finding it difficult to meet their contractual obligations(P.Vamsi Krishna & T.Sreenivas). At this moment , Crypto currency is a better investment. This paper is to identify the best investment strategies of BitCoin and Ethereum

Methodology of the study

The data was collected through secondary sources through online portals for a period between 09-11-2017 to 30-10-2022. The following techniques are used :

- a) Time Series Analysis
- b) Correlation Analysis
- c) ANOVA
- d) Decision Tree Analysis

Bitcoin : Time series analysis performed between 09/11/2017 to 30/10/2022

The forecasting trend seems to be increasing from Oct 1st 2022 to Dec 31st 2022 however the lower confidence bond range is decreasing and the upper confidence bond range is increasing so in this connection, the day-to-day Ethereum currency fluctuations will take place (increasing or Decreasing) within the boundary limits.

BitCoin: Chart 3

This Chart depicts the Bitcoin Series 1 : 2017, Series 2: 2018, Series 3:2019 , Series 4:2020, Series 5: 2021, Series 6: 2022 ,initially 2022 dominated the investment and returns as compared with 2021, however the year 2021 which signifies the robust increase in the year of Cryptocurrency tremendously which also increases the no. of Risks Associated with it due to its increase in Demand and Interest among the present Investors.

Ethereum :Chart 4

This Chart depicts the Ethereum Series 1: 2017, Series 2: 2018, Series 3:2019, Series 4:2020, Series 5:2021, Series 6:2022, Initially in the year 2022 dominated by Ethereum, later on the curve of 2021 dominated as compared to 2022 due to the risk and return factor

Correlation : Table 3 :Bitcoin and Ethereum

Correlations		BTC	ETH
BTC	Pearson Correlation	1	.911**
	Sig. (2-tailed)		.000
	N	1786	1786
ETH	Pearson Correlation	.911**	1
	Sig. (2-tailed)	.000	
	N	1786	1786

** . Correlation is significant at the 0.01 level (2-tailed).

From Pearson correlation analysis of BTC and ETH, the value is .911 which highlights highly correlated.

**ANOVA :
Table 4 : BitCoin
SUMMARY**

Groups	Count	Sum	Average	Variance
2017	53	646578.2173	11973.67069	18927108
2018	365	2776389.818	7585.764531	6169239
2019	365	2697623.737	7370.556657	7056693
2020	366	4019962.542	10983.50421	17050787
2021	265	17303793.22	47278.12354	1.02E+08
2022	273	8658243.797	31599.42992	95072458

**Table 5: Bitcoin
ANOVA**

Source of Variation	SS	df	MS	F	P-value	F crit
Between Groups	457183527689.278	5	91436705538	2168.351	0	2.219108
Within Groups	75313422473	1781	42168769.58			

From the above table significant value is zero which shows that every year the means of BitCoin from year to year is varying.

**ANOVA :
Table 6: Ethereum**

SUMMARY

Groups	Count	Sum	Average	Variance
2017	53	27769.42	523.9513751	29943.15
2018	365	177170	485.3973837	89925.68
2019	365	66346.76	181.7719472	2536.544
2020	366	111959.2	305.899433	20369.75

2021	365	1011494	2771.215477	1059765
2022	273	608079.7	2227.398066	590457.6

Table 7 : ANOVA

Source of Variation	SS	df	MS	F	P-value	F crit
Between Groups	2059656031	5	411931206.2	1245.57	0	2.219122
Within Groups	589007099.3	1781	330717.0686			

From the above table the significance is less than 0, which shows that every year the means are different and they are varying.

Anova:

Table 8 : **BitCoin vs Ethereum**

SUMMARY

Groups	Count	Sum	Average	Variance
Column 1	1786	2001483.096	1120.651229	1483819.01
Column 2	1786	36090474.33	20207.43243	297209406.4

Table 9 : ANOVA

Source of Variation	SS	Df	MS	F	P-value	F crit
Between Groups	3.25325E+11	1	3.25325E+11	2178.318964	0	3.84406493
Within Groups	5.33167E+11	3570	149346612.7			
Total	8.58492E+11	3571				

From the above Table, since the significance is less than 0, there is difference between Means of BitCoin and Ethereum cryptocurrency

BitCoin : Decision Tree Analysis

Table 10 : Model Summary

Specifications	Growing Method	CHAID
	Dependent Variable	2022.
	Independent Variables	2017., 2018., 2019., 2020., 2021.
	Validation	None
	Maximum Tree Depth	3
	Minimum Cases in Parent Node	100
	Minimum Cases in Child Node	50
Results	Independent Variables Included	2019.
	Number of Nodes	4
	Number of Terminal Nodes	3
	Depth	1

Chart 5 : Bitcoin Decisoin tree

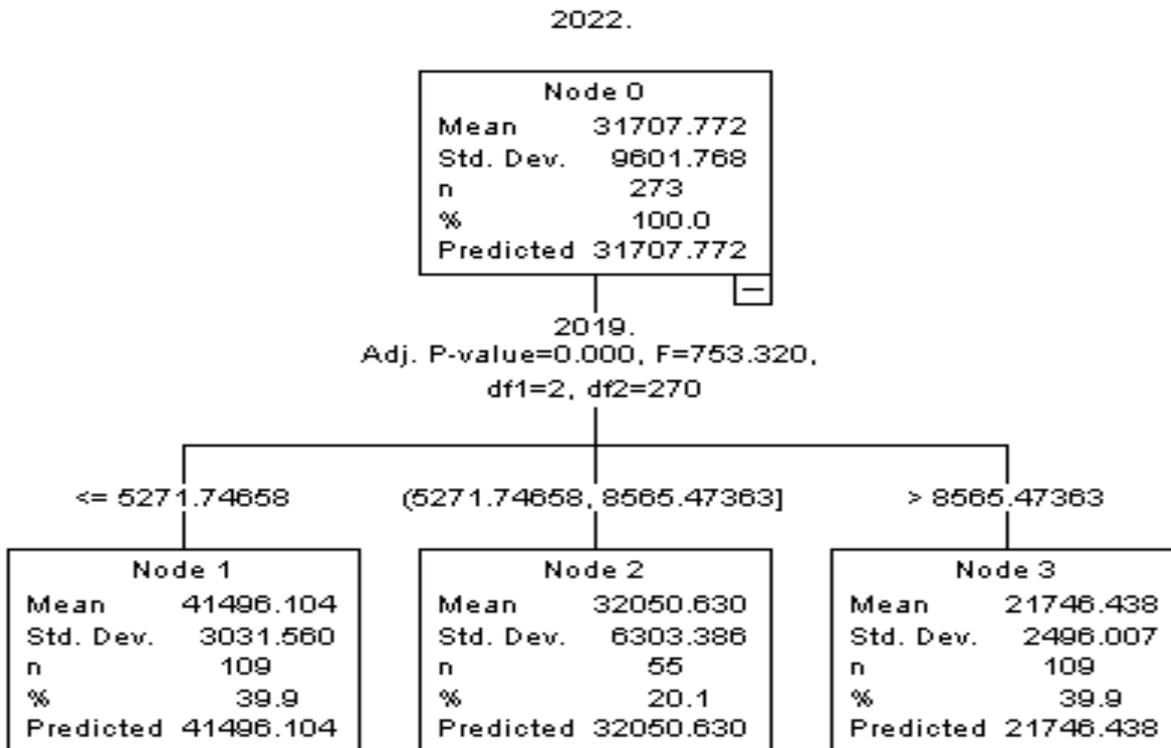

Table 11: BitCoin Tree Table

Node	Mean	Std. Deviation	N	Percent	Predicted Mean	Parent Node	Primary Independent Variable					
							Variable	Sig. ^a	F	df1	df2	Split Values

3	21746.438289	2496.0073492	109	39.9%	21746.438289	0	2019.	.000	753.320	2	270	> 8565.47363

Growing Method: CHAID

Dependent Variable: 2022.

a. Bonferroni adjusted

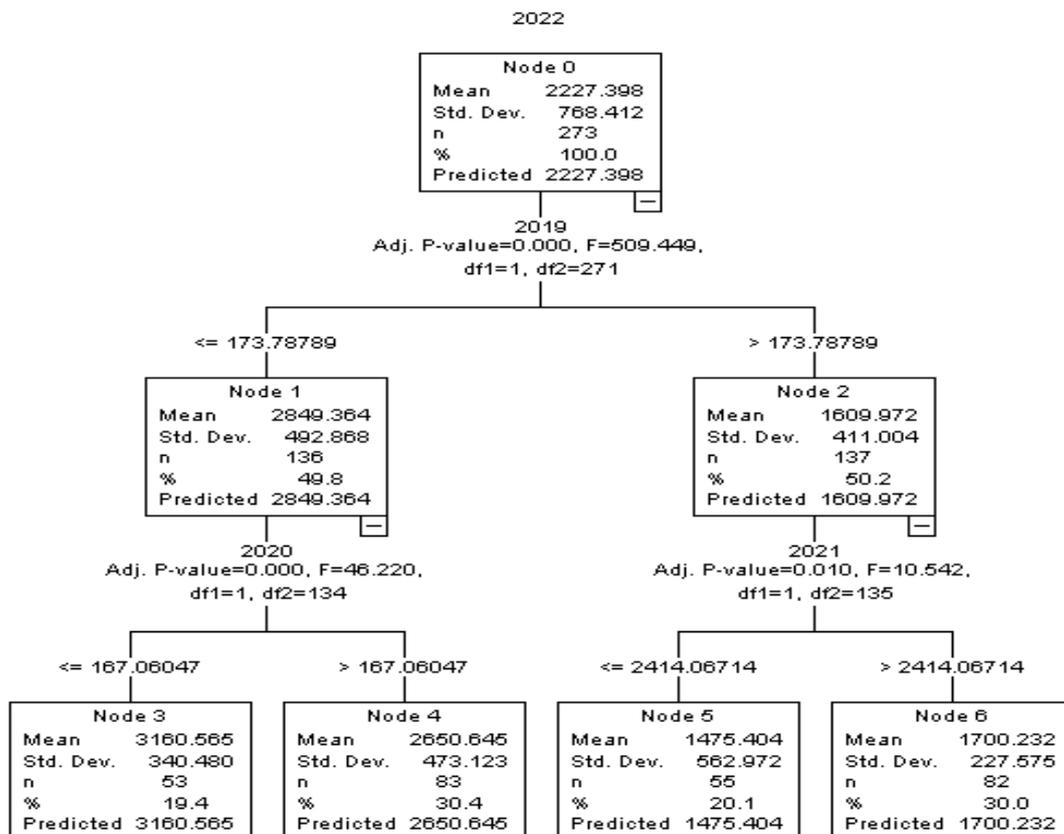

Since the value of significant is zero and we can consider the value of $f=753.320$, Node 3 and Node 2 combines 60% , therefore BitCoin predicted value this year 2022 from October to December 2022, the Bitcoin price ranges between 21746 to 32050, where as Node 1 is too high.

Ethereum : Decision Tree Analysis

Model Summary

Specifications	Growing Method	CHAID
	Dependent Variable	2022
	Independent Variables	2017, 2018, 2019, 2020, 2021

Risk

Estimate	Std. Error
167374.352	26817.644

Growing Method: CHAID

Dependent Variable: 2022

Since Ethereum is more fluctuating, it possess 4 nodes. Node 4 and Node 6 60.4% predicted value.

Findings of the Study :

1. Time Series Analysis – BitCoin forecasting trend is increasing whereas Ethereum is more fluctuating
2. Trend series : 2021 investment and returns of crypto currencies is the highest year due to Covid-19 scenario(better investment)
3. Correlation Analysis – BitCoin and Ethereum crypto currencies are highly correlated
4. ANOVA Analysis highlights year to year the BitCoin and Ethereum prices are varying and they are different(Mean values)
5. Decision Tree Analysis highlights different nodes and wise investment and return details

Conclusion:

Cryptocurrency returns are not significantly correlated with traditional asset classes such as stocks, currencies, and commodities. Simultaneously, cryptocurrency returns can be predicted by two market-specific factors – momentum and investor attention. We discover that the cross-sectional anticipated cryptocurrency returns are captured by three factors: cryptocurrency market, size, and momentum. We create cryptocurrency equivalents for a broad range of price- and market-related performance predictors in the stock market. We demonstrate that all of these successful long-short strategies, which yield sizeable and statistically significant excess returns. Finally, we investigate probable underlying processes of the scale and momentum effects of cryptocurrencies.
