

A STUDY ON INVESTMENT ANALYSIS ON ITC

R. SHARANYA

1. Abstract: This study offers an investment analysis for ITC, one of India's biggest companies. The study employs fundamental analysis to gauge ITC's intrinsic value and assess its financial performance. In order to determine ITC's position in the market, the report also examines market developments and the competitive environment. The analysis ends with a suggestion regarding whether or not to invest in ITC.

2. Introduction: ITC Limited is a well-known Indian conglomerate with a variety of operations, including paperboards, packaging, FMCG, hotels, and cigarettes. The business is growing its global impact while also having a significant presence in India. To assess ITC's investment potential, a potential investor must thoroughly examine the company's financial results and market trends. Using basic analysis and industrial research, this essay offers an investment analysis of ITC. To make a recommendation on whether to invest in ITC, the study intends to assess ITC's financial performance, calculate its intrinsic worth, and examine the industry trends and competitive landscape. One of the biggest corporations in India, ITC Limited operates a variety of industries, including packaging, FMCG, hotels, paperboards, and cigarettes. The business is well-known in India and is expanding internationally. The fundamental analysis and industry analysis used in this article to create an investment analysis for ITC.

3. Literature Review: According to the literature, fundamental analysis is a popular method for assessing a company's financial performance. In order to determine an organization's intrinsic value, this method entails examining its financial documents, including the income statement, balance sheet, and cash flow statement. Additionally, according to the literature, industry analysis is crucial for comprehending market potential, competitive landscape, and industry trends.

4. Methodology: The financial performance of ITC and market trends is analyzed using a qualitative methodology in this article. Secondary sources used in the study to gather data include firm reports, academic journals, and industry reports. The study then conducts a content analysis of the data to assess ITC's financial performance and market trends .

5. Results: ITC appears to have great financial performance based on the study's findings, which include a high profitability margin, a low debt-to-equity ratio, and a healthy cash position. The corporation also has a varied portfolio of businesses and a significant presence across a number of industries. The survey also reveals that the tobacco industry, one of ITC's main lines of business, is experiencing difficulties as a result of tightening laws and a decline in smoking rates. ITC has been able to overcome these difficulties, though, because to its other ventures in the FMCG and hotel industries.

6. Discussion: The study's findings have a number of ramifications for investors. ITC has a varied business portfolio and solid financial performance, which lowers the risk of investing in the company. ITC's major business, the tobacco sector, is facing difficulties, which may have a long-term negative influence on the company's expansion. When making investment decisions, investors should take these things into account.

7. Conclusion: According to the investment research for ITC, the business has a broad business portfolio and solid financial performance. However, one of ITC's main businesses, the tobacco industry, is having problems. When making investment decisions, investors should take these things into account.
