"A study on Investor Perception towards Mutual Fund Decision"

KRISHA ASHISHKUMAR PATEL Student B.V Patel Institute of Management,

Uka Tarsadia University- Bardoli

DR. MANISHA SURTI Assistant Professor B.V Patel Institute of Management,

Uka Tarsadia University- Bardoli

ABSTRACT:

A mutual fund is a trust that team up the saving of number of investors who share a common economic goal. They are investment vehicles and one can use them to invest in assets such as equities of fixed income. It is managed by professional fund managers. It provides risk diversification benefits of making investments in mutual fund are reduction of risk, liquidity, affordability, convenience flexibility and variety. Customer has to identify the best mutual fund management companies and also the suitable schemes among the various schemes floated by mutual fund decision. Mutual fund is still and would continue to be the unique financial tool in the country. One has to appreciate the fact that every aspects of life as its periods of high and lows. Mutual fund has not failed in any country where they worked with regulatory frame work. The future is bright. The poor performance of many mutual funds schemes may be mostly attributed to the quality of personal involved and their matter of fund management.

INTRODUCTION:

A mutual fund is a professionally managed investment fund that pools money from many investors to purchase securities. Mutual funds are often classified by their principal investments: money market funds, bond or fixed income funds, stock or equity funds, or hybrid funds. Funds may also be categorized as index funds, which are passively managed funds that track the performance of an index, such as a stock market index or bond market index, or actively managed funds, which seek to outperform stock market indices but generally charge higher fees. Primary structures of mutual funds are open-end funds, closed-end funds, unit investment trusts. Open-end funds are purchased from or sold to the issuer at the net asset value of each share as of the close of the trading day in which the order was placed, as long as the order was placed within a specified period before the close of trading. They can be traded directly with the issuer or via an electronic trading platform or stockbroker.

Mutual funds have advantages and disadvantages compared to direct investing in individual securities. The advantages of mutual funds include economies of scale, diversification, liquidity, and professional management. However, these come with mutual fund fees and expenses. Mutual funds are regulated by

governmental bodies and are required to publish information including performance, comparison of performance to benchmarks, fees charged, and securities held. A single mutual fund may have several share classes by which larger investors pay lower fees.

REVIEW OF LITERATURE:

Priyanka Sharma, Payal Agrawal (2015) "Investor preference toward Mutual Fund as an Investment option." To analysis the impact of demographic factors in influencing buyer's decision. To identify the intensity of various factors that positively and adversely affect buyer's decision. It is concluded that the MFs business in Udaipur is still in an embryonic stage. So, concerted efforts and needed for its success. The success depends upon high returns, professional competence of fund managers, a MF brings together a group of people and invests their money in stocks, bonds and other securities, it has so many advantages such as professional management, economics of scale. The MF should be easy to buy and sell through broker or directly in the market. It also has some draw backs such as low awareness, too many formalities, difficult to select.

V. Rathnamani (2013) "Investor's Preferences towards Mutual Fund Industry in Trichy." To find out which factors attract investors to invest in mutual fund and to analyse the investors awareness and perception regarding mutual fund. The study explains that many investors are preferred to invest in mutual fund in order to have high return at low level of risk, safety liquidity. In this study investors are willing to take moderate and low level risk; most of the investors belong to moderate investment style.

Gupta (2012) "Investor preference towards mutual fund and other financial assets." To know the preference of investor and their need regarding mutual fund investment. Find out investor can also plan like one mutual fund of diversified equity plan, second mutual fund of balanced type. Particularly the small investors, mutual funds have provided a better alternative to obtain benefits of expertise based on equity investments to all types of investors. Studied relating various issues like types of mutual fund schemes, level of satisfaction, role of the financial advisor and brokers, source of information and deficiency of service provided by the MF managers etc.

Preeti Khitoliya (2014) "Investors Awareness & perceived risk attitude towards mutual fund" To understand the investor's perceptions and awareness level about mutual fund and its functioning as an investment instruments. It concludes that tax benefit and flexibility as the greatest benefit of investing in mutual fund followed by transparency, diversification and return. Majority respondent in the age of 35-44 wish to invest in the mutual fund which ensures wealth maximization followed by balanced fund and income funds similar results were seen in the age group of 25-34 but a reverse trend was seen in the age group of 45+ years where

majority was risk aversive as they expressed to invest in mutual fund scheme which guarantees safety of principal amount followed by balanced fund and growth fund.

Gaurav Agrawal and Dr. Mini Jain (2013) "Investors preference towards mutual fund in comparison to other investment avenues" To find out the overall criterion of investors regarding. Maximum investors are preferring about banks & LIC investment avenues only.

D. Senthil and Dr. M. Syed Zefar (2005) "Mutual Fund- Investors' Perceptions and realities". To study says that investors prefer mutual fund than share because high risk is associated with shares. It concludes main purpose of the study is to identify the factors which make them invest and to retain in mutual fund. The main aim of the study is to find out the investors perception and realities in the current scenario and measure extend of satisfaction derived by customer towards the performance of mutual fund and willingness to invest in future despite the current prevailing condition of the market.

"A conducted a study to assess the awareness of mutual funds among the investors to identify the information sources influencing the buyer decision and the factors influencing the choice of a particular fund"

RESEARCH OBJECTIVES

- To study the various factors affecting investor perception towards mutual fund.
- To study the investors perception and interest towards mutual funds.

RESEARCH METHODOLOGY

1. Research problems

What is investors' perceptions towards mutual fund?

2. Research Design

Generally, there are three types of Research Design.

- Exploratory research design.
- Descriptive research design.
- Casual research design.

In context of this project report I have utilized descriptive research design.

3. Data Collection

Primary Data

To primary data collection by questionnaire.

Secondary Data

To secondary data collection by websites, magazines & newspaper.

4. Sampling size: 153

5. Sampling Design

Sampling method

Random sampling method which gives equal chance to all respondent for filling the questionnaire & express their view.

Convenience sampling

Convenience sampling is used in reliable design but normally cheapest & easiest to conduct. In this design the researcher has to freedom to choose the respondents according to their convenience, so that point of view I used the convenience sampling method.

6. Sampling area: Chikhli and Valsad city.

DATA ANALYSIS

Chi-Square Tests:

H0: There is no significant relationship between demographic variables and investing in mutual fund.

H1: There is a significant relationship between demographic variables and not investing in mutual fund.

Represents the relationship respondents.

Demographic	Do you invest in	mutual fund?	Chi – Squar	re								
Factor	Yes	No	χ2	Df	P- Value							
Gender

Above 20	17	5	-		

From the above table it can interpret that, the P-Value is greater than 0.05 in the gender and education qualification which is rejected. All another factor is less than 0.05 which is accepted. So there is no relationship between all the factor.

H0: There is no significant relationship between demographic variables and factor affecting mutual fund decision.

H1: There is a significant relationship between demographic variables and not factor affecting mutual fund decision.

Represents the relationship between respondents of age.

From the above table it can interpret that, the P-Value which are greater than 0.05 where all the factor which is rejected and another factor which is less than 0.05 which is accepted. So there is no relationship between all factors.

Represents the relationship between respondents of occupation.

Conclusion

A mutual fund is a trust that team up the saving of number of investors who share a common economic goal. They are investment vehicles and one can use them to invest in assets such as equities of fixed income. It is managed by professional fund managers. It provides risk diversification benefits of making investments in mutual fund are reduction of risk, liquidity, affordability, convenience flexibility and variety. Customer has to identify the best mutual fund management companies and also the suitable schemes among the various schemes floated by mutual fund decision.

Mutual fund is still and would continue to be the unique financial tool in the country. One has to appreciate the fact that every aspects of life as its periods of high and lows. Mutual fund has not failed in any country where they worked with regulatory frame work. The future is bright. The poor performance of many mutual funds schemes may be mostly attributed to the quality of personal involved and their matter of fund management.

In conclusion, it is important to remember the main purpose for initiating the project to analyse the investor perception towards mutual fund decision and the aspect to guide for the investment decision.
