Great cities plan for people, not global agendas!

"To follow what you have been told makes you a follower not a leader"

-Aditya Jain

Indore, which is cleanest city of India & also full of descent & mannered people. This makes it the perfect city for research and experimentation of how cities should be designed. It is growing but not completely taken shape, it can be molded and shaped in a way that can test how other cities can be modeled. Larger cities do not have the luxury to re grow and to be reshaped to the future. They are large, rigid & have established business. New ideas do not grow in rigid atmosphere.

Indore is clearly a city that will continue to grow but will also maintain its flexibility, providing space for new ideas.

In this research paper I intend to question common urban development trends and try to represent the Indore city in its present form.

Should Indore Follow Net Zero Agenda?

Net zero represent the idea that all the carbon emission must be reduced in a cyclic manner on the periodic basis such that total amount of carbon emission created must be equal to the total carbon emission saved based over that period.

Global planners even intends to create markets where carbon emission credit (tickets/coupons) can be traded, creating a new kind of economic activity. Hopefully not benefiting just the wealthy & helping everyone.

While it is strongly recommended by the author to not pollute environment in any way possible, it is also important to create a healthy environment to prosper for everyone & not just the ones who can invest time, energy & money. Not everyone is capable to follow new rules & also more measurement represent more complexity & hassle.

To make so many cities follow same model is to create so many similar & ordinary uncreative bricks.

Argument Against Carbon Emission Rules-

It represent carbon only, no information on other gases.

It add a new layer of complexity, meaning more hassle for growing business & people.

Just like mandatory taxes, there was no concent in the first place for any carbon rules. Nobody asked any individual, even once raising moral issues.

Rich and powerful always has wealth, employees, connections & ways to bribe the concerned shifting the burden completely on smaller people.

Just like modern "Shell companies" & "Tax Loop Holes" there will be ways to avoid these, reserved only for few.

By defining the ways in which any new entity can behave we restrict the ways in which it cannot hence restricting the ways on divergent & creative behavior.

Everyone loves barbecue, or burning wood in cold or candle light dinner. Can simple fun be a crime?

Who will pay for new adoptions? Their maintenance & installation & till when? If the new adoption is a money burden, will government continue to make up for losses?

Less freedom to the individual, more power to the authority. Can a civilization prosper without a free individual?

Fore is useful for manufacturing, cooking, lighting, religious ceremony, culture, celebration, defense, heating and so on. It is an extremely important tool. To completely take away fire would mean to make everyone completely depend. Its not a good thing unless its the original intention.

Humans do not live in a closed system or a bubble. Any cycle like this is unnecessary. Nature breaks carbon & provides oxygen.

Discrepancy in rules. Small plot owners get less FAR. Will something similar be for carbon rules. Uneven benefits are not welcome.

An image showing technology & state having too much power over people.

An image showing convenience offered by technology in future.

A Poem For Indore-

Indore: The Heart of Malwa

In the heart of Malwa, where rivers meet,
Lies Indore city, vibrant and sweet.
A tapestry woven with culture and grace,
Where history and modernity share their space.

The Rajwada stands, a regal delight,
Whispering tales through the day and night.
A legacy etched in sandstone walls,
Echoing grandeur in its hallowed halls.

Sarafa bazaar, a nocturnal spree,
Where flavors dance in joyous glee.
From poha-jalebi to kulfi divine,
Each bite a story, each taste a sign.

The temple of Khajrana, serene and grand,
Filling hearts with blessings so planned.
A place where faith and devotion thrive,
A beacon of hope to keep dreams alive.

Lal Bagh Palace, a sight to behold,
With its opulent halls and stories untold.
Nature's embrace in Pipliyapala's view,
A lake that sparkles in the morning dew.

The city hums with industrious cheer,
Yet its charm remains warm and clear.
A melting pot of the old and new,
Where aspirations rise with skies so blue.

Indore, the gem of Madhya Pradesh,
Your vibrant soul will always refresh.
Forever alive in the hearts you touch,
A city loved by all, so very much.

Jai shree mahakal, may shiva bless you all!
