## ABSTRACT:

Nowadays there is a tough competition for getting a job and one of the biggest trials for many job-seekers is creating the perfect resume. The resume is the very first thing that a potential employer encounters regarding an applicant and is used to screen applicants, often followed by an interview. This research paper aims to specify a method for creating resumes in a very simpler and user friendly way. We are proposing a website that will help applicants in creating resumes by simply taking their information as input. Online Resume Development Website allows users to login/signup and let them create, update, delete, view and save their resume in pdf format.

## INTRODUCTION

This is a website that helps us to build a resume for individuals. The system is workable for creating an appropriate resume according to qualification by reducing the need of thinking. Usually individuals get confused while creating a resume especially fresher's who are looking for new jobs. They are not much clear about what things and information must be included in a resume.

This website will provide an easy way of developing a resume that will look like a professional resume.

This website requires less human interruption and a user friendly app. Individuals just have to fill in the required fields of the form such as educational information, interest, skills, work experience and so on. The information given by the user will be stored in the system and generate a well-structured resume. Users will be able to create a resume in any format. The proposed website will reduce the manual work of individual as a person can get his resume in a formal format without any issues just by using this

Online Resume Development Website. It is mainly focused on format by simply choosing the desired template and giving some necessary

details to the application and the online resume development website will process this raw information into the finished resume easily.

## LITERATURE REVIEW

### A. Manual Creation of Resume

Long Back resumes were created manually by using MS Word and the format at that time was quite different. These are the fields that applicants used to mention in their resumes, in personal information applicants used to write their name, address and phone number. Applicants also used to mention their personal opinion in their resume. That time applicants used to mention their both early and recent education details. Applicants used to create either too short or too long resumes because at that time there were no standards set for ideal length of resumes.

## B. Inference Drawn From Conclusion

Some inferences are drawn from literature review and research regarding what should be the length of a resume? What information should be included in a resume? What information should be avoided while writing a resume? Ideally in personal information, name, address, phone number, email address should be included and height, weight, religion, birth date, marital status should be
avoided. Resumes of one page length are preferred more over resumes of two page length.
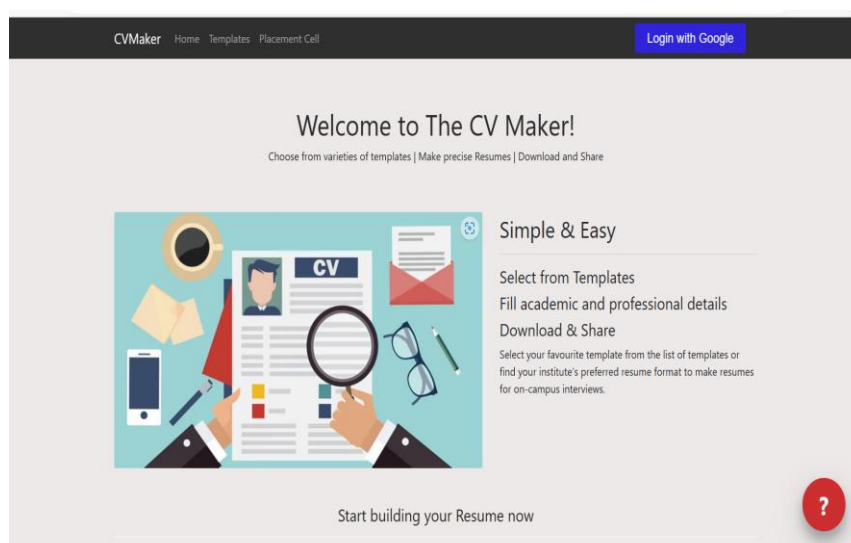

## PROBLEM STATEMENT AND SOLUTION APPROACH
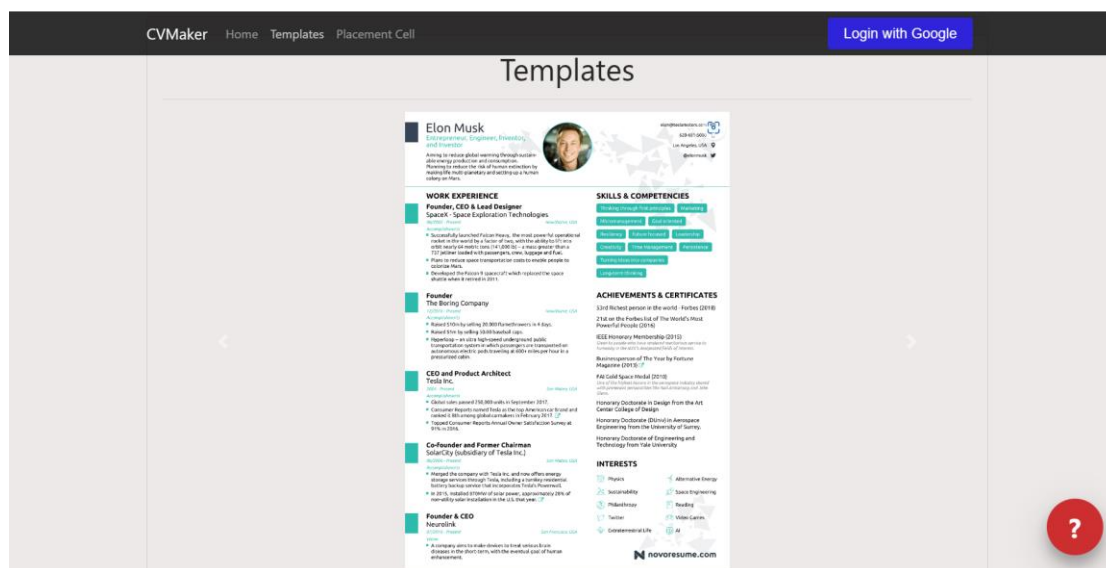

### A. Problem in existing system

The existing system is creating resumes manually either by using word or Google doc so there are some issues with the existing system. The existing system was suffering from a series of drawbacks. Since the whole of the system was to be maintained with hands the process of keeping, maintaining and retrieving the information was very tedious and lengthy. The records were never
used to be in a systematic order there used to be lots of difficulties in associating any particular transaction with a particular context. If any information was to be found it was required to go through the different registers, documents there would never exist anything like report generation. There would always be unnecessary consumption of time while entering records and retrieving records. One more problem was that it was very difficult to find errors while entering the records. Once the records were entered it was very difficult to update these records. The reason behind it is that there is a lot of information to be maintained and has to be kept in mind while making the resume. The existing system is quite laborious and time taking. The existing system is time taking and difficult. Some applications and websites
are also providing the facility to create resumes but those applications and websites are charging for the same so those systems are
not cost effective.

### B. Proposed Work

1. *This website allows users to login/signup*

*2)* This website allows and suggests users to choose from several creative and up-to-date templates to make their resume more eye-catching to HR.

*3)* This website generate resume according to the internationally recognized format of resume.

*4)* This website does the proper grammar and spelling check of the resume for the user so they don't have to worry about grammatical havocs.

*5)* This website has 128 bit encryption of user data, so the user does not have to worry about data theft.

*6)* This would be facilitating the employees to make and print their resumes in a proper format.

*7)* This website automates the process of creating resumes by simply taking information as input from the us

## C. Comparison Between Proposed and Existing Systems

In the previous method of creating resumes manual work is required while in the proposed system online resume development website automates the creation of resumes, it just takes information from users in the form of input via user friendly interface and generates resume in pdf format. Proposed system follows the internationally acceptable format for resume creation while in manual creation of resumes users have to take care of a format that is quite a difficult task. Proposed system creates resumes within no time while manual creation of resumes takes a lot of time. In proposed systems editing is very simple and user friendly while in manual creation of resume modification is difficult and time taking task.

## D) Advantages

*1)* It is free of cost.

*2)* It saves time for users

*3)* It helps users to focus on content.

## TECHNOLOGY USED

*1)* HTML5
*2)* CSS
*3)* JAVASCRIPT
4) BOOTSTRA4

## FUTURE ENHANCEMENT

In near future, we are planning to add more new features like documentation. So that users can use it and make them feel it is one of the best website for creating resumes. We are working to increase features, application development in the website to increase user experience great.

## CONCLUSION

This paper summarized the importance of a perfect resume and method to create formal and eye-catching resumes. The proposed website is very helpful and makes the resume formation easy so that a person can get his resume in a formal format without any issues just by using this online resume development website. It is mainly focused on format by simply choosing the desired template and
giving some necessary details to the website and the online will process this raw information into the finished resume easily.
