

# SAVE TREES (2-D ANIMATION)

Dr.P. Vasanth

Assistant Professor, Dept of Software Engineering,

Periyar Maniammai Institute of Science and Technology, Thanjavur.

Mr.V.Suvindhar

Student of Dept of Software Engineering,

Periyar Maniammai Institute of Science and Technology, Thanjavur.

## ABSTRACT

Deforestation is the permanent destruction of forests, which can occur for a variety of reasons, including agricultural expansion, logging, mining, and infrastructure development. Deforestation has serious environmental consequences, including loss of biodiversity, soil erosion, water pollution, and climate change.

## SCRIPT WRITING

There is one village filled with dense of forest. The forest is look very beautiful. The birds are chirping here and there. The wild animals are taking the food in their own way and living very peacefully. One day a man come and get the sticks in the forest. At the end of the day a man and his friends are sit together and talk about something. Next day a man and his friend go to forest and cut down the trees. As same as end of the day they sit themselves. Another day some vehicles come and cut down the trees. Now the dense forest is completely cutted by the humans.

## EXITING SYSTEM

Many companies now offer paperless billing, which allows customers to receive their bills and statements via email or through their online account. This eliminates the need for paper bills and reduces paper waste. Planting trees is an effective way to save trees. When people plant trees, they contribute to the growth of new forests, which helps to offset the loss of trees due to deforestation.

## PROPOSED SYSTEM

Reducing consumption of paper and wood products, and opting for recycled or sustainable alternatives. Supporting sustainable forestry practices and certification programs that ensure responsible management of forests. Planting new trees, either through individual efforts or through participation in reforestation

programs. Supporting policies and initiatives that aim to reduce deforestation and promote conservation and sustainable land use practices.

### **Background Design**

When it comes to creating a background design for a 2D animation, there are a few key factors to keep in mind to ensure that the background fits well with the overall aesthetic and feel of the animation. Overall, creating a background design for a 2D animation requires careful consideration of the style, composition, and details to ensure that it fits well with the overall aesthetic of the animation.

### **Character Design**

Character design is an essential aspect of any form of storytelling, whether it be in literature, film, television, animation, or video games. The characters are the heart and soul of a story, and their design plays a significant role in capturing the audience's attention and engaging them emotionally with the story. character design is a crucial element in any form of storytelling. A well-designed character can enhance the story, engage the audience emotionally, and become an iconic symbol for the story itself.

### **Stages of production**

- 1) **Pre-production:** This stage involves all the planning and preparation work that takes place before the actual filming or recording of the content. It includes tasks such as scriptwriting, casting, location scouting, set design, storyboard creation, and scheduling. Pre-production is critical because it sets the foundation for the entire project and helps ensure that everything runs smoothly during production.
- 2) **Production:** This stage involves the actual filming or recording of the content. It includes tasks such as lighting, sound recording, camera work, and directing. The production stage is where all the planning and preparation from the pre-production stage come together to create the actual content.
- 3) **Post-production:** This stage involves all the work that takes place after the production stage has been completed. It includes tasks such as video and audio editing, special effects, color grading, and sound mixing. The post-production stage is where the content is polished and refined to create a final product that is ready for distribution.

Each stage is essential to the overall success of the project, and they all require different skill sets and expertise. It is crucial to have a well-coordinated team that can work together effectively to ensure that each stage is completed to a high standard.

## Conclusion

our planet's health and well-being. Trees are essential for providing us with clean air, absorbing carbon dioxide, and reducing the effects of climate change. They also provide habitats for countless species of animals and plants, and they contribute to the soil's health and stability. We can help save trees by reducing our paper usage, supporting sustainable forestry practices, and planting more trees. By taking these steps, we can ensure that we have healthy forests that will continue to benefit us and future generation.
