

WILL CHAT GPT REPLACE HUMAN JOBS A BIG QUESTION?

Aryan Patel,

Bhartiya Vidya Bhavans VM Public School,

Vadodara, Gujarat

First, What is ChatGPT?

If you don't know what it is yet, then it is a cutting-edge AI tool released by **OpenAI** in November 2022, which gained **1 MILLION users in just five days**; if we compare it with other big platforms like Netflix, Facebook and Instagram, it took them 3.5 Years, 10 Months and 2.5 months respectively to gain this much of audience attention and user base. It can do almost anything and can boil down tens of hours of work in just one click, and the explanation it gives is spectacular; the information is so precise that they are just as you would want and can directly use in your Project. It gives everything in a very systematic manner that will please you and save your life. Astonishingly, it can also write creative content for websites, articles, blogs, Emails, Tweets, and Essays, and you won't believe it, Letters too; you have to write what you want it to do for you, and it would get the job Done.

The revolutionary thing is that along with these many features, it can even write CODE in several different programming Languages such as Python, HTML, CSS, Javascript, Typescript, Ruby, SQL etc. It can also translate code from one language to another. It also explains the code and other concepts, exactly like a teacher.

How does it work?

Chat GPT uses a type of Artificial Intelligence called a language model, a type of software designed to generate text like humans. It does this by looking at a large amount of data and learning the patterns and rules of language, like the meaning of words, their structure and how to use them in different contexts and situations. But as it's an AI, its information can not always be correct. It can also present incorrect and harmful information, so in short, ChatGPT is a powerful tool to be Highly creative and Efficient. Still, it's not a substitute for Human Expertise and theory.

Will ChatGPT replace human professionals and cause a drastic reduction in employment status?

Now comes the most important question, and the answer is **NO**; ChatGPT will not replace human professionals as we are the only ones who built it, so it cannot succeed us. Yes, it's correct that it is very fast and effective compared to humans, but it's not better than us. It can be very intelligent, but at last, as the name suggests, this is Artificial Intelligence and isn't really as Intelligent as we think it is. Now you might be thinking why it will not replace human professionals and take their place, so the answer to that is, to make sure this doesn't happen, the developers have restricted ChatGPT from accessing the Internet, next you might be thinking then how it answers all my question. The answer is that it does so with the help of the data fed to it, and for reference, the data accessible by ChatGPT is only data till 2021.

To conclude, ChatGPT will not replace human professionals and bring a drastic employment drop; it will complement humans and make their work easier.
